Appendix B:

GIS Maps
SURVEY RESPONDENTS PER COUNTY

Respondents from every county in Missouri participated in this research. The following map shows approximately how many surveys were conducted in each county. Some counties had significantly more participants than others due to the research design mandating a minimum of 500 responses per district.

INTERPRETING THE MAPS

The maps on the following pages show the mean ratings for several questions on the survey by district. The mean ratings were calculated by allocating 1 point for each strongly disagree, 2 points for each somewhat disagree, 3 points for each somewhat agree, and 4 points for each strongly agree and then computing the mean for each district. Responses of don’t know and those who did not provide a response to this question were not included in this analysis. Mean weightings of 1.0 to 1.75 indicate that the overall population strongly disagrees with the question. Mean weighting of 1.75 to 2.5 indicate that the overall population somewhat disagrees with the question. Mean weightings of 2.5 to 3.25 indicate that the overall population somewhat agrees with the question. Mean weightings of 3.25 to 4.0 indicate that the overall population strongly agrees with the question. If all the areas on a map are the same color, then people generally feel the same about that issue regardless of where they reside.
Q. 2a  MoDOT provides accurate information to citizens about road projects, highway conditions, and work zones.

The following maps show the mean ratings for several questions on the survey by district. For these questions, the respondents had the opportunity to select neutral as an option. The mean ratings for these questions were calculated by allocating 1 point for each very dissatisfied or strongly disagree, 2 points for each dissatisfied or somewhat disagree, 3 points for each neutral, 4 points for each satisfied or somewhat agree, and 5 points for each very satisfied or strongly agree and then computing the mean for each district. Responses of don’t know and those who did not provide a response to this question were not included in this analysis. Mean weightings of 1.0 to 1.8 indicate that the overall population is very dissatisfied with the issue or strongly disagrees with the question. Mean weightings of 1.8 to 2.6 indicate that the overall population is dissatisfied with the issue or somewhat disagrees with the question. Mean weightings of 2.6 to 3.4 indicate the overall population is neutral on this subject. Mean weightings of 3.4 to 4.2 indicate that the overall population is satisfied with the issue or somewhat agrees with the question. Mean weightings of 4.2 to 5.0 indicate that the overall population is very satisfied with the issue or strongly agrees with the question. If all the areas on a map are the same color, then people generally feel the same about that issue regardless of where they reside.

Q. 3a Remove debris, such as dead animals, glass, and torn tires from the driving lanes on highways
