Subject: Computer Stored Pay Items

Body

Questions concerning the distribution of revisions to bid items should be directed to General Headquarters, Design Standards Section, Luke Coltrane (573) 526-4331 or Bruce Green (573) 751-9248.

NOTE	EXPLANATION
1	The following listing shows item numbers in the computer pay items database (containing both English and Metric pay items) that were added, revised or made obsolete between July 1 and September 30, 2002. The following pay item changes are effective for jobs to be let after April 1, 2003.
2	For pay item revisions that involve only a change in item description, the item number will not change. For a material or process change, or a change in units or type, that will affect the price history of an item, an alphanumeric character will be added at the end of the existing number to indicate a revised item. For example, 403-60.00, if revised would become 403-60.00A. This process eliminates creating an excessive amount of new numbers in the database.
3	Please note in this letter the extensive addition of the 910 pay items for ITS use. These pay items do not have any correlating specifications or plans as of yet, so JSP's, special drawings, and other current methods will still be required to support these items. The specifications and plans for 910 will slowly follow, as this is still a newer concept, and things are just starting to become consistently standard. These portions of the pay items being released are the items that most felt would not drastically change in the future. Releasing these now will help us begin obtaining a bid history and a database that can show how things are being used. The current use of 99 numbers doesn't allow for this tracking, and are harder to keep track of for the designer. You will also notice the addition of the 910-99#'s along with the deletion of the 930-99#'s. This is to keep all ITS items in the 910's. This will

be effective for any projects let after April 1, 2003
