

# Design Standards Letter

Letter Number: **G-1961-79**

Letter Date: **11/09/1961**

Effective Date: **11/09/1961**

Section/Plan No.: **None**

Subject: **Design Manual Revision Section 14 - Seeding Mixtures**

Body

-----  
Pages 14.21 and 14.22 of the Design Manual have been revised to change the recommended seeding mixtures tabulated in Tables 14.8 and 14.9.

The primary purpose of this revision is to eliminate crown vetch seed from the mixtures since it is very costly and almost impossible to obtain.

Several copies of revised Pages 14.21 and 14.22 are being furnished under separate cover to replace the present corresponding pages in the Manual.

we have also attached a revised example of a Special Provision that is furnished by the Districts to cover the rates of seeding and fertilizing. This new example is to be used as a guide in lieu of the one submitted with General Letter 1961 - No. 10. Your attention is directed to the fact that if the Effective Calcium and Hydrated Lime rates are left blank, the rates set out in the Standard Specifications will be in effect. If the soil test indicates that Calcium or Hydrated Lime is not required, a zero (0) rate is specified for both of these items.
