

Design Standards Letter

Letter Number: G-1967-25

Letter Date: 07/27/1967

Effective Date: 09/29/1967

Section/Plan No.: None

Subject: Revised and New Standard Drawings

Body

ALL DIVISION AND DISTRICT ENGINEERS AND CHIEF COUNSELS:

We are furnishing you herewith several copies of the following revised or new standard drawings which will be used where applicable, beginning with the September 29, 1967 Letting.

Drawing 70.24

This is new drawing which combines Drawing 70.23 with the power supply assembly on Drawing 71.00. Further, an alternate service drop detail has been added to be used on projects where the electrical service is supplied by Kansas City Power and Light Company. This drawing is intended primarily for use in the Kansas City area; however, it may be used elsewhere, if applicable.

Drawing 71.00

The schematic wiring diagram for power supply at controller has been revised to connect down-lights and automatic time switch to the circuit for controllers and accessories instead of to the circuit for signal lights.

Drawing 80.48

This drawing has been revised to correct the number of "C" bars in both the five-foot by two-foot and five-foot by three-foot drop inlets. In each case, the number of "C" bars has been reduced by three. This resulted in a change in weight of steel in the table of quantities. Steel quantities on plans should be corrected accordingly.
