Subject: Design Manual Revision of Weigh Stations - Check List of Pages and Figures

Body

ALL DIVISION AND DISTRICT ENGINEERS AND CHIEF COUNSELS:

We are furnishing you herewith several copies of revised Figure 14.26 of the Design Manual illustrating Typical Layout for Weigh Stations.

This revision was made to facilitate the construction of a continuous safety zone on the throughway adjacent to the weight station layout. Major revisions include increasing the distance between the throughway and weigh station ramp pavements, utilization of a straight-line ramp taper and increased lengths of reverse curves for the deceleration lane, and increasing the length of the acceleration lane.

In addition, we are furnishing you a check list of pages and figures in the Design Manual with the applicable revision dates. Since this list is valid only as of August 22, 1967, every effort should be made to check your Manuals as soon as possible. Please advise this office if any errors or omissions are noted in the check list.

L. V. McLaughlin
