Section/Plan No.: None

Subject: New Standard Drawing and Special Provision - Bituminous Drain Basin and Shoulder Treatment at Bridge Ends

Body

ALL DIVISION AND DISTRICT ENGINEERS AND CHIEF COUNSEL:

We are furnishing you herewith copies of a new standard drawing and special provision for Bituminous Drain Basins and Shoulder Treatment at Bridge Ends.

This new method of handling drainage at bridge ends will replace present methods indicated on Standard Drawings 48.30 and 84.01. This drawing can be used with either straight or turn back bridge wings and does not conflict with standard guard rail construction at bridge ends (i.e. post may be driven through bituminous material or the bituminous material placed around post).

The shoulder paving details shown are applicable to all shoulder width bridges regardless of drainage requirements. This paving shall be the same construction as the travel way pavement and tabulated and paid for under the same item or items.

All plans not yet submitted shall be revised to incorporate this design.

L. V. McLaughlin
