

Design Standards Letter

Letter Number: G-1969-03

Letter Date: 01/09/1969

Effective Date: 01/09/1969

Section/Plan No.: P607.10, P607.20, P901.1

Subject: Revised Standard Drawings

Body

ALL DIVISION AND DISTRICT ENGINEERS

We are furnishing you several copies of the following revised Standard Drawings, which will be included in applicable proposals beginning with the March, 1969 Letting.

Drawing 607.10A - The sketch of the Type B Fence with barbed wire bracket, and the Typical Location Sketch have been revised to indicate that the fence fabric is to be placed on the travel way side of the posts in lieu of placing it on the right-of-way side.

Drawing 607.20A - The Typical Fence Location sketch has been revised similar to Drawing 607.10A in that the fence fabric is on the travel way side of the fence posts. The fabric and barbed wire will continue to be placed on the outside of posts on corners and curves.

Drawing 901.01A - On Section A-A of the steel pile foundation, the 5/16 inch weld note has been revised to require that the weld be ground as necessary to clear the bolt heads.

Please note that as drawings are revised, an orderly alphabetical system will be used to identify the revision. The letter A designation on the drawing number indicates the first revision and the effective date of such revision is indicated outside the lower left border line. This letter designation is an integral part of the Drawing number.

The Drawing Check List, Form SP-2, has a space after the drawing numbers to facilitate your entering of the latest drawing revision by alphabetical letter until such time as the form is revised.
