

Design Standards Letter

Letter Number: G-1988-13

Letter Date: 11/17/1988

Effective Date: 11/17/1988

Section/Plan No.: None

Subject: Loop Detector Conduit Markers

Body

A suggestion to place saw marks on concrete curbs along loop detector conduit runs for signal projects has been approved for implementation.

When loop detectors are specified on signal projects, a note should be added to the plans requiring the contractor to make a small saw mark on the curb directly above the conduit that goes to the pull box out in the island. This would locate the conduit for future reference. This information will be added to the design manual in the near future.

Please implement the preceding upon receipt of this letter for all projects in such a stage of design as to allow practical revisions.
