DATE: October 15, 2013

SUBJECT: I-64, St. Louis
6I3056
Bridge Replacement at Chesterfield Parkway West
Proprietary Item Request

MoDOT constructed steel ornamental fencing on several bridges as part of the Route 141 ARRA project, 6U0807. This was done in agreement with the City of Chesterfield where the city has agreed to maintain this fencing.

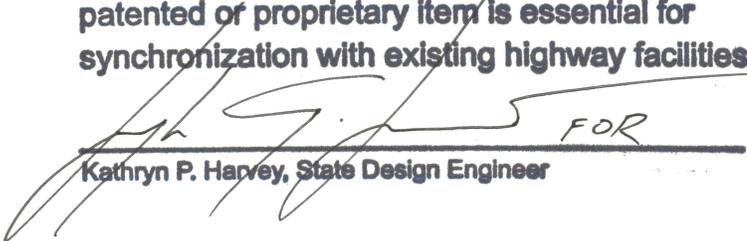

The above project will replace the existing bridge at Chesterfield Parkway West and the city has requested that the same fencing used on the 141 project be used on the 6I3056 project as well. The fence will be used on the bridge and on top of three retaining walls. The city will also be maintaining this fencing per maintenance agreement. This will make it easier for the city to maintain all ornamental fencing on either project since it will be the same fence from the same manufacturer and provide the uniform aesthetic look that they are trying to achieve throughout the city.

The fence is manufactured by Merchant Metals and is the "Monroe Style – 2 rail" fencing system.

We seek approval to use this fence for the 6I3056 project.

Please advise.

I do hereby certify that in accordance with the requirements of 23 CFR 635.411(a)(2), this patented or proprietary item is essential for synchronization with existing highway facilities.

FOR
Kathryn P. Harvey, State Design Engineer
